

SUBNET Continuous Current Evolution Software Maintenance Program

Isolate From Change

Centrally Manage Change

Simplify Your Life

Technology changes are expensive and unpredictable. Continuous Current Evolution (CCE) protects your system, your time, and your budget from change. SUBNET products help avoid costly per device changes by isolating end devices from change. CCE helps you centrally manage the unavoidable changes you do need.

The Economics are Simple

- Your CCE investment is significantly less than purchasing software upgrades for new features
- With CCE your software upgrades are free

Budgeting is Simple

- Fixed, predictable maintenance costs
- Free Engineering services to help manage change
- No more waiting on PO approvals and budget cycles for every little change

Membership is Simple

- Annual CCE membership is based on your current SUBNET inventory
- Memberships renew on an annual basis
- Additional substation level software purchased during the year is covered automatically at no extra cost

The SUBNET product family is designed to isolate substation devices from change.

- Evolving NERC CIP requirements
- Extended features for existing IEDs
- Password management
- Settings change detection
- Configuration management
- Evolving remote access security
- Virus protection updates
- Cyber-attack protection
- Access logging
- and the list keeps growing ...

CCE controls the cost and complexity of the changes you do need.

CCE 2015 PROMOTIONS EXTENDED UNTIL JUNE 30, 2015
